Subject Index of Volume 30

AlGaAs
advances in the development of an AlGaAs/GaAs cascade solar cell using a patterned germanium tunnel interconnect, 345
II–VI alloys
thin films of II–VI compounds and alloys, 123
Annealing
annealing effects on individual loss mechanisms in $CuInSe_2$ solar cells, 101
crystallized amorphous silicon for low-cost solar cells, 403
defect equilibration and metastability in low-spin-density amorphous hydrogenated silicon, 235
surface passivation of polycrystalline, chalcogenide based photovoltaic cells, 53
Arsenic
low temperature homoepitaxial growth of GaAs by dissociating trimethylgallium and trimethylarsenic in a remote hydrogen plasma, 415
Atomic layer epitaxy
materials aspects of multijunction solar cells, 305

Cadmium telluride
cadmium telluride module development, 137
Cascade solar cell
advanced in the development of an AlGaAs/GaAs cascade solar cell using a patterned germanium tunnel interconnect, 345
Cd(Zn)Te
preparation of Cd(Zn)Te and $CuInSe_2$ films and devices by a two-stage process, 143
CdTe
advances in $CuInSe_2$ and CdTe thin film solar cells, 61
fabrication of CdTe solar cells by laser-driven physical vapor deposition, 79
growth and process optimization of CdTe and CdZnTe polycrystalline films for high efficiency solar cells, 109
CdZnTe
growth and process optimization of CdTe and CdZnTe polycrystalline films for high efficiency solar cells, 109
III–V cells
thin film approaches for high-efficiency III–V cells, 337
Chalcogenide
surface passivation of polycrystalline, chalcogenide based photovoltaic cells, 53
Charge-carrier lifetimes
silicon float-zoned crystal growth for high minority charge-carrier lifetime material applications, 5
Chemical vapor deposition
crystallized amorphous silicon for low-cost solar cells, 403
textured fluorine-doped ZnO films by atmospheric pressure chemical vapor deposition and their use in amorphous silicon solar cells, 437
Chemical-vapor deposition
deposition of μc-Si and μc-Si-C thin films by remote plasma-enhanced chemical-vapor deposition, 419
II–VI compounds
thin films of II–VI compounds and alloys, 123
Computer simulations
high-performance concentrator tandem solar cells based on IR-sensitive bottom cells, 363
Concentrator efficiencies
high-performance concentrator tandem solar cells based on IR-sensitive bottom cells, 363
Conversion efficiencies
overview of amorphous silicon photovoltaic module development, 277
review of the application of molecular beam epitaxy for high efficiency solar cell research, 313

Elsevier Sequoia/Printed in The Netherlands

Conversion efficiency
tandem gallium solar cell voltage-matched circuit performance projections, 355
Copper
Cu/In deposited at room temperature: morphology, phases and reactions, 451
the phase behavior of evaporated copper and indium precursors for selenization, 41
Cost
cost and performance sensitivity studies for solar photovoltaic/electrolytic hydrogen systems, 515
Crystal growth
silicon float-zoned crystal growth for high minority charge-carrier lifetime material applications, 5
$CuInSe_2$
advances in $CuInSe_2$ and CdTe thin film solar cells, 61
annealing effects on individual loss mechanisms in $CuInSe_2$ solar cells, 101
characterization of the defect levels in copper indium diselenide, 151
$CuInSe_2$ module environmental reliability, 549
$CuInSe_2$ photovoltaic modules, 131
enhanced grain growth in polycrystalline $CuInSe_2$ using rapid thermal processing, 47
preparation of Cd(Zn)Te and $CuInSe_2$ films and devices by a two-stage process, 143
the formation of $CuInSe_2$ thin films by rapid thermal processing, 69
thoughts on the microstructure of polycrystalline thin film $CuInSe_2$ and its impact on material and device performance, 21

Defect equilibration
defect equilibration and metastability in low-spin-density amorphous hydrogenated silicon, 235
Defect levels
characterization of the defect levels in copper indium diselenide, 151
Defects
what can we learn from the saturation of light-induced defects in amorphous hydrogenated silicon?, 177
Degradation
field test results for the 6 MW Carrizo solar photovoltaic power plant, 563
the effects of impurities on the light-induced degradation of hydrogenated amorphous silicon, 293
three-year performance and reliability analysis of a 4 kW amorphous–silicon photovoltaic system in Michigan, 535
Density of states
distribution of the density of states of bonded hydrogen in amorphous hydrogenated silicon, 207
Device geometry
non-linear recombination processes in photovoltaic semiconductors, 163
Disilane
High-deposition-rate amorphous silicon solar cells: silane or disilane?, 271

Electroluminescence
electroluminescence studies of recombination in hydrogenated amorphous silicon p–i–n devices, 219
Electrolytic hydrogen
cost and performance sensitivity studies for solar photovoltaic/electrolytic hydrogen systems, 515
Electron cyclotron resonance
electron cyclotron resonance microwave plasma deposition of a-Si:H and a-SiC:H films, 391
Electron mobility
hydrogen content and the goal of stable efficient amorphous-silicon-based solar cells, 255
Electron spin resonance
defect equilibration and metastability in low-spin-density amorphous hydrogenated silicon, 235
Ellipsometry
broad band spectroscopic ellipsometry for the characterization of photovoltaic materials, 473
Encapsulation
crystallized amorphous silicon for low-cost solar cells, 403
solarex experience with ethylene vinyl acetate encapsulation, 383
Encapsulation design
cadmium telluride module development, 137

Environmental issues
environmental, health and safety issues associated with the manufacture and use of II–VI photovoltaic devices, 89
Environmental reliability
$CuInSe_2$ module environmental reliability, 549
Ethylene vinyl acetate
field test results for the 6 MW Carrizo solar photovoltaic power plant, 563
solarex experience with ethylene vinyl acetate encapsulation, 383
Eureka modules
reliability studies of Eureka modules, 559

Fluorine
textured fluorine-doped ZnO films by atmospheric pressure chemical vapor deposition and their use in amorphous silicon solar cells, 437

GaAs
advances in the development of an AlGaAs/GaAs cascade solar cell using a patterned germanium tunnel interconnect, 345
low temperature homoepitaxial growth of GaAs by dissociating trimethylgallium and trimethylarsenic in a remote hydrogen plasma, 415
Gallium
low temperature homoepitaxial growth of GaAs by dissociating trimethylgallium and trimethylarsenic in a remote hydrogen plasma, 415
tandem gallium solar cell voltage-matched circuit performance projections, 355
Germanium
advanced in the development of an AlGaAs/GaAs cascade solar cell using a patterned germanium tunnel interconnect, 345
recent amorphous silicon research results at the Solar Energy Research Institute, 15
structural, optical, and electrical studies of amorphous hydrogenated germanium, 245
Grain growth
enhanced grain growth in polycrystalline $CuInSe_2$ using rapid thermal processing, 47
Grid metallization
practical guidelines for grid metallization in photovoltaic solar cell research, 459
Growth optimization
growth and process optimization of CdTe and CdZnTe polycrystalline films for high efficiency solar cells, 109

Health issues
environmental, health and safety issues associated with the manufacture and use of II–VI photovoltaic devices, 89
High efficiency
growth and process optimization of CdTe and CdZnTe polycrystalline films for high efficiency solar cells, 109
High-deposition-rate
high-deposition-rate amorphous silicon solar cells: silane or disilane?, 271
Homoepitaxial growth
low temperature homoepitaxial growth of GaAs by dissociating trimethylgallium and trimethylarsenic in a remote hydrogen plasma, 415
Hydrogen
cost and performance sensitivity studies for solar photovoltaic/electrolytic hydrogen systems, 515
distribution of the density of states of bonded hydrogen in amorphous hydrogenated silicon, 207
hydrogen content and the goal of stable efficient amorphous-silicon-based solar cells, 255

Impurites
the effects of impurtities on the light-induced degradation of hydrogenated amorphous silicon, 293
Indium
Cu/In deposited at room temperature: morphology, phases and reactions, 451
the phase behavior of evaporated copper and indium precursors for selenization, 41
Individual loss mechanisms
annealing effects on individual loss mechanisms in $CuInSe_2$ solar cells, 101

Laminates
field test results for the 6 MW Carrizo solar photovoltaic power plant, 563
Laser
fabrication of CdTe solar cells by laser-driven physical vapor deposition, 79
Load reduction
early experiences of the 15 kW NMPC demand-side management photovoltaic project, 529

Materials
a novel reactor for large-area epitaxial solar cell materials, 323
broad band spectroscopic ellipsometry for the characterization of photovoltaic materials, 473
materials aspects of multijunction solar cells, 305
silicon solar cell materials research: current progress and future needs, 373
Metastability
defect equilibration and metastability in low-spin-density amorphous hydrogenated silicon, 235
distribution of the density of states of bonded hydrogen in amorphous hydrogenated silicon, 207
Microdefects
silicon float-zoned crystal growth for high minority charge-carrier lifetime material applications, 5
Microstructure
recent amorphous silicon research results at the Solar Energy Research Institute, 15
structural, optical, and electrical studies of amorphous hydrogenated germanium, 245
the phase behavior of evaporated copper and indium precursors for selenization, 41
thoughts on the microstructure of polycrystalline thin film $CuInSe_2$ and its impact on material and device performance, 21
Microwave plasmas
electron cyclotron resonance microwave plasma deposition of a-Si:H and a-SiC:H films, 391
Modules
$CuInSe_2$ module environmental reliability, 549
progress on high performance multijunction amorphous hydrogenated silicon alloy based solar cells and modules, 261
three-years performance and reliability analysis of a 4 kW amorphous–silicon photovoltaic system in Michigan, 535
Molecular beam epitaxy
review of the application of molecular beam epitaxy for high efficiency solar cell research, 313
Morphology
Cu/In deposited at room temperature: morphology, phases and reactions, 451
thoughts on the microstructure of polycrystalline thin film $CuInSe_2$ and its impact on material and device performance, 21
Multijunction
the difference between standard and average efficiencies of multijunction compared with single-junction concentrator cells, 501

Passivation
surface passivation of polycrystalline, chalcogenide based photovoltaic cells, 53
Phase behavior
the phase behavior of evaporated copper and indium precursors for selenization, 41
Photocarrier drift
photocarrier drift measurements and solar cell models for amorphous silicon, 227
Photochemical vapor deposition
hydrogen content and the goal of stable efficient amorphous-silicon-based solar cells, 255
Photoconductive films
structural, optical, and electrical studies of amorphous hydrogenated germanium, 245
Photoluminescence
characterization of the defect levels in copper indium diselenide, 151
Photon recycling
non-linear recombination processes in photovoltaic semiconductors, 163

II–VI photovoltaic devices
environmental, health and safety issues associated with the manufacture and use of II–VI photovoltaic devices, 89
Photovoltaic module
advances in double-junction amorphous silicon photovoltaic modules, 285
overview of amorphous silicon photovoltaic module development, 277
Photovoltaic modules
cadmium telluride module development, 137
$CuInSe_2$ photovoltaic modules, 131
needs of the amorphous silicon program with respect to stabilized module performance, 195
solarex experience with ethylene vinyl acetate encapsulation, 383
Photovoltaic semiconductors
non-linear recombination processes in photovoltaic semiconductors, 163
Process optimization
growth and process optimization of CdTe and CdZnTe polycrystalline films for high efficiency solar cells, 109

Radiation
solar radiation research for photovoltaic applications, 489
Rapid thermal processing
enhanced grain growth in polycrystalline $CuInSe_2$ using rapid thermal processing, 47
the formation of $CuInSe_2$ thin films by rapid thermal processing, 69
Reactor
a novel reactor for large-area epitaxial solar cell materials, 323
Recombination
electroluminescence studies of recombination in hydrogenated amorphous silicon p–i–n devices, 219
non-linear recombination processes in photovoltaic semiconductors, 163
surface passivation of polycrystalline, chalcogenide based photovoltaic cells, 53
thin film approaches for high-efficiency III–V cells, 337
Reliability
reliability studies of Eureka modules, 559
Reliability analysis
three-year performance and reliability analysis of a 4 kW amorphous–silicon photovoltaic system in Michigan, 535

Safety issues
environmental, health and safety issues associated with the manufacture and use of II–VI photovoltaic devices, 89
Sandblasting
reliability studies of Eureka modules, 559
Saturation
what can we learn from the saturation of light-induced defects in amorphous hydrogenated silicon?, 177
Selenization
advances in $CuInSe_2$ and CdTe thin film solar cells, 61
the phase behavior of evaporated copper and indium precursors for selenization, 41
Silane
high-deposition-rate amorphous silicon solar cells: silane or disilane?, 271
Silicon
advances in double-junction amorphous silicon photovoltaic modules, 285
crystallized amorphous silicon for low-cost solar cells, 403
defect equilibration and metastability in low-spin-density amorphous hydrogenated silicon, 235
deposition of μc-Si and μc-Si-C thin films by remote plasma-enhanced chemical-vapor deposition, 419
distribution of the density of states of bonded hydrogen in amorphous hydrogenated silicon, 207
electroluminescence studies of recombination in hydrogenated amorphous silicon p–i–n devices, 219
electron cyclotron resonance microwave plasma deposition of a-Si:H and a-SiC:H films, 391
high-deposition-rate amorphous silicon solar cells: silane or disilane?, 271
hydrogen content and the goal of stable efficient amorphous-silicon-based solar cells, 255
needs of the amorphous silicon program with respect to stabilized module performance, 195

overview of amorphous silicon photovoltaic module development, 277
photocarrier drift measurements and solar cell models for amorphous silicon, 227
progress on high performance multijunction amorphous hydrogenated silicon alloy based solar cells and modules, 261
recent amorphous silicon research results at the Solar Energy Research Institute, 15
silicon float-zoned crystal growth for high minority charge-carrier lifetime material applications, 5
silicon solar cell materials research: current progress and future needs, 373
textured fluorine-doped ZnO films by atmospheric pressure chemical vapor deposition and their use in amorphous silicon solar cells, 437
the effects of impurities on the light-induced degradation of hydrogenated amorphous silicon, 293
three-year performance and reliability analysis of a 4 kW amorphous–silicon photovoltaic system in Michigan, 535
what can we learn from the saturation of light-induced defects in amorphous hydrogenated silicon?, 177

Silicon module
early experiences of the 15 kW NMPC demand-side management photovoltaic project, 529

Single-junction
the difference between standard and average efficiencies of multijunction compared with single-junction concentrator cells, 501

Tandem designs
high-performance concentrator tandem solar cells based on IR-sensitive bottom cells, 363

Thin film
advances in $CuInSe_2$ and CdTe thin film solar cells, 61
broad band spectroscopic ellipsometry for the characterization of photovoltaic materials, 473
$CuInSe_2$ photovoltaic modules, 131
deposition of μc-Si and μc-Si-C thin films by remote plasma-enhanced chemical-vapor deposition, 419
needs of the amorphous silicon program with respect to stabilized module performance, 195
surface passivation of polycrystalline, chalcogenide based photovoltaic cells, 53
the formation of $CuInSe_2$ thin films by rapid thermal processing, 69
thin film approaches for high-efficiency III–V cells, 337
thin films of II–VI compounds and alloys, 123
thoughts on the microstructure of polycrystalline thin film $CuInSe_2$ and its impact on material and device performance, 21

Thin films
electron cyclotron resonance microwave plasma deposition of a-Si:H and a-SiC:H films, 391
preparation of Cd(Zn)Te and $CuInSe_2$ films and devices by a two-stage process, 143

Transport properties
recent amorphous silicon research results at the Solar Energy Research Institute, 15

Vapor deposition
fabrication of CdTe solar cells by laser-driven physical vapor deposition, 79
review of the application of molecular beam epitaxy for high efficiency solar cell research, 313

X-ray scattering
recent amorphous silicon research results at the Solar Energy Research Institute, 15

ZnO
textured fluorine-doped ZnO films by atmospheric pressure chemical vapor deposition and their use in amorphous silicon solar cells, 437
